

Geodezia International

Past and Future – Data Collection Technologies to Provide Precise Data for GeoBIM and Smart Cities

MIDDLE EAST[™]
GEOSPATIAL
FORUM

26-27 JANUARY, 2016
AL BUSTAN ROTANA HOTEL
DUBAI, UAE

 **THEME: SMART TECHNOLOGIES, SMART CITIES, SMARTER LIVES**

- **INFORMATION AND DATA MANAGEMENT**

- **MEDIUM TO HIGH RESOLUTION GEOMETRY**

MEDIUM TO HIGH ABSOLUTE ACCURACY

HIGH RELATIVE ACCURACY

- **MOST RECENT DATA**

FAST & REPEATABLE DATA ACQUISITION

- **COMPREHENSIVE DATA**

COMBINATION OF TECHNOLOGIES TO COVER EVERY AREA OF INTEREST

- **SINGLE POINT MEASURING (KEY POINTS) WITH SURVEYING INSTRUMENTS**
SLOW, EXPENSIVE, SOMETIMES DANGEROUS
- **ORTHOPHOTO INTERPRETATION FOR 2D**
RELATIVELY CHEAP, NO HEIGHT, NO DATA UNDER VEGETATION
- **STEREO-PHOTO PROCESSING FOR 3D**
RELATIVELY CHEAP, NO FACADES, NO DATA UNDER COVERED AREA
- **ATTRIBUTES CAN BE COLLECTED ON THE FIELD ONLY**
AIMED DATA COLLECTION, BUT ONLY AIMED ATTRIBUTES COLLECTED,
HARD TO COLLECT GEOMETRIC ATTRIBUTES (TRUNK DIAMETER,
CLEARANCE, ETC.)

**The future has started:
3D point cloud technology can support BIM & Smart Cities**

What 3D point cloud offer: Measurable 3D reality

**PRECISELY MEASURABLE & DIGITALIZED
3D REALITY** (ACCURACY = EVEN 1 CENTIMETER)

**FLEXIBLE AND EFFICIENT GIS DATA
MANAGEMENT**

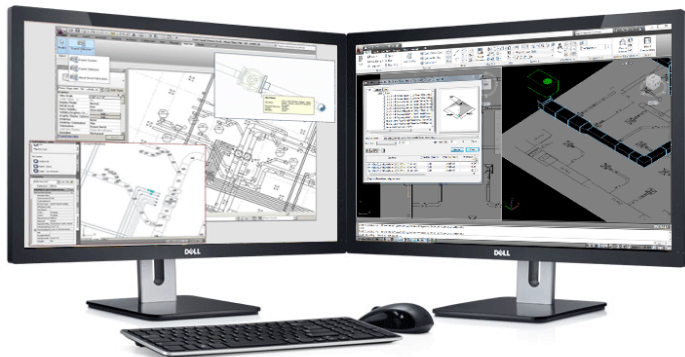

**MERGING GIS DATA FROM
DIFFERENT SOURCES**

What 3D point cloud offer: Measurable 3D reality

The 3D point cloud technology has added value to support BIM by:

Providing accurate GIS database quickly, with no traffic limitation and with high cost efficiency and on this way, supporting ROI of BIM & Smart City projects

Ensuring efficient data management according any kind of customer needs.

3D point cloud creation - Why Mobile Laser Scanning (MMS)?

The most efficient solutions to provide 3D point cloud GIS data

- **Complexity:** Surveys everything in 360° angle
- **Accuracy:** even 1 centimeter
- **Cost and time efficiency:** 1-10% of field surveying time vs. traditional solutions
- **Flexible usage:** No traffic limitations
- **Re-processable:** according to different needs
- **Additional information:**
Geometry and geo-tagged pictures

Solutions to provide high resolution everywhere

Under Surface

- Under ground
- Under water

On surface

- Outside (on road, on railway, on water, pedestrian)
- Inside the building

Above surface from the air

- UAV (drone)
- Airborne LIDAR

Surveyors can provide data efficiently for a complete City BIM

Railway infrastructure

Road infrastructure

Buildings inside-outside

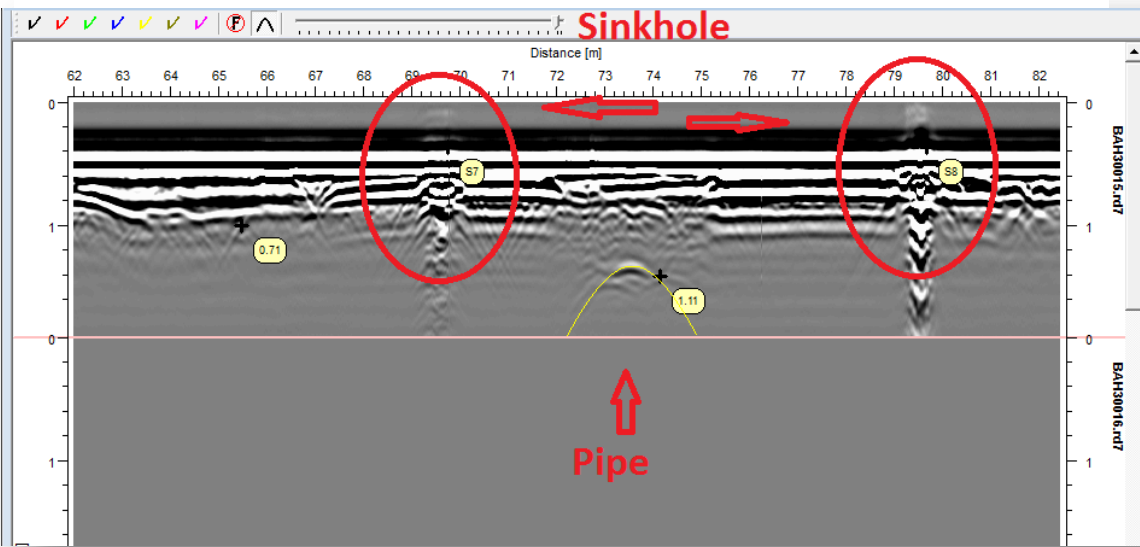

Underground public utility

Telco infrastructure

Metro infrastructure

Under solid surface

- Utility locators (metallic pipes, cables)
- Ground Penetrating Radar (GPR)
- These techniques can complement surface data (but provide only discrete positions)

Under water

- Green Laser aerial-scanning (4-10 m depth)
- Ultra-sound depth profiling

Under water

- Green Laser aerial-scanning (up to 4-10 m)
- **Ultra-sound depth profiling (almost no depth limit)**

- Single beam echo/sounder
- Multi-beam
- Single frequency
- Dual frequency
- Profiling (side looking)
- Manned/Unmanned

On Surface - Outside

- **Mobile Mapping**
 - Traffic network, railways and roads
 - Facades
 - Group of buildings
 - Complete cities or countries
- **Terrestrial Scanning**

3D point cloud - On Surface - Outside

HIGHWAY JUNCTION OVERPASS

HIGHWAY JUNCTION OVERPASS

3D point cloud - On Surface - Outside

On Surface - Outside

- Mobile Mapping
 - Traffic network
 - Facades
- Terrestrial Scanning
 - Standalone objects
 - Heritage buildings

3D point cloud

On Surface - Inside

- **Terrestrial Scanning**
 - Interior details (furniture level)
 - Inner Facades, Quadrangles
- **Backpack Solutions**
 - Difficult room layout
 - Passages, corridors
 - Narrow areas

3D point cloud - On Surface - Inside

On Surface - Inside

- **Terrestrial Scanning**
 - Interior details (furniture level)
 - Inner Facades, Quadrangles

- **Backpack Solutions (Leica)**
 - Difficult room layouts
 - Passages, corridors
 - Narrow areas

Measuring in difficult or crowded areas is not a problem

Measuring in details with high accuracy

Railway mapping - Overhead cable system

Very difficult systems can be easily surveyed

Railway mapping - Overhead cable system

...and data processed

Railway mapping - Overhead cable system

...and data processed

Railway mapping - Overhead cable system

...and data processed

Railway mapping - Overhead cable system

...and data processed

Height above the as-built axis

Distance to the as-built axis

Karawanks Tunnel (7864 m)

Karawanks Tunnel (7864 m)

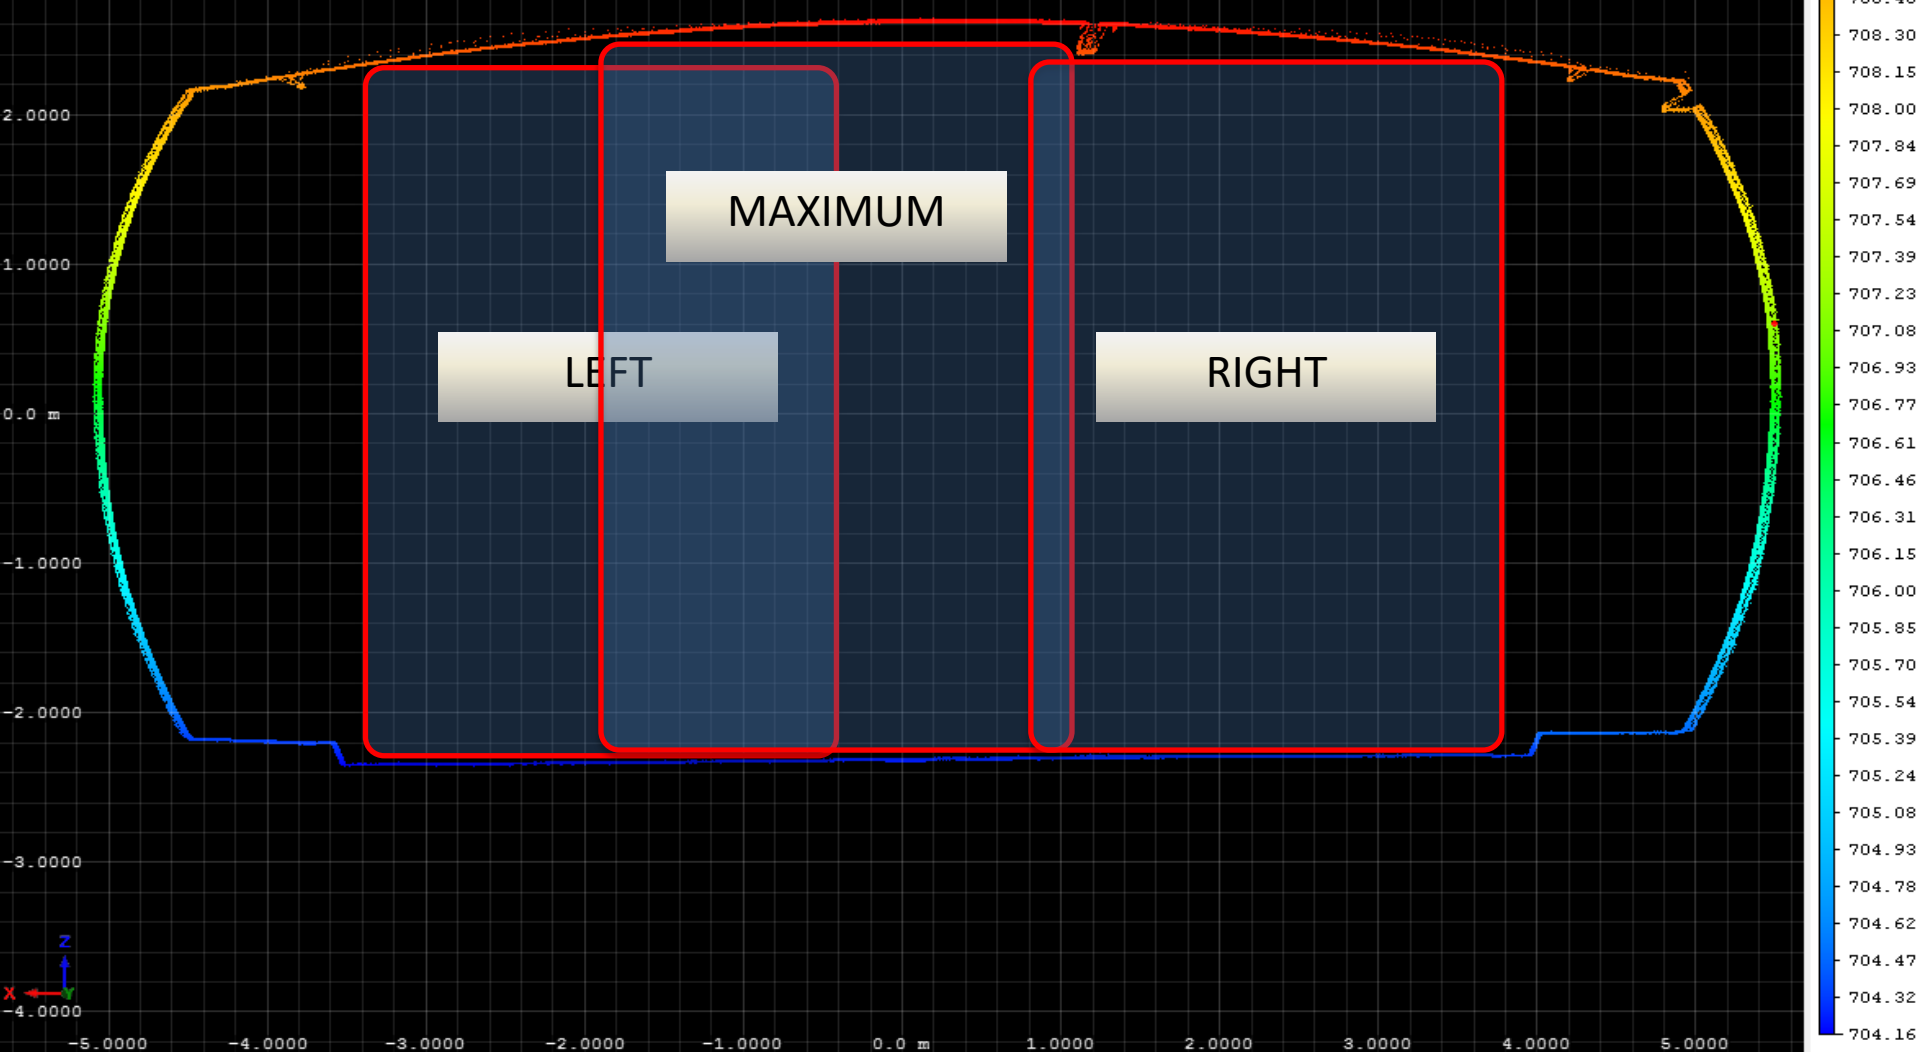

Measuring in Tunnels and Metro

Karawanks Tunnel (7864 m)

Clearance check

UAV - Photogrammetry - Pointcloud - DSM - DTM

Pointcloud from photo model

Triangle Mesh from Photo model

1 cm ground resolution orthophoto

The 3D point cloud technology can support efficiently even the largest BIM & Smart City projects.

It can provide permanently the most accurate and detailed GIS data from every geographical level with extremely short field work time and improving ROI of BIM projects.

Combination of surveying techniques necessary to cover all demands

“What you cannot measure,
you cannot improve”

Thank you
for your kind
attention
